

ONESHEET

AVEVA™ Unified Operations Center for Marine (ship operations)

Bring end-to-end operational visibility across Marine operations to maintain operational conditions, achieve greater situational awareness and improve crisis response with AVEVA Unified Operations Center for Marine (UOC). Empower the whole team with a centralized view to help make informed decisions, fast. Unified Operations Center for Marine is based upon a system of systems approach that converges OT and IT technology into a single pane-of-glass solution. This contextualizes actionable information, providing an overall perspective on ship and fleet operations, and the vessel sub-systems that manage specific areas such as fuel management, critical equipment, routing optimization, connected worker, and fleet management.

Converge & contextualize data

Unified Operations Center for Marine normalizes operational views into how ships are performing by aligning information from numerous disparate sub-systems into a context-aware 360-degree control environment.

Map-based fleet tracking model

Start with a global perspective on ship deployments and drill down for ship-by-ship functional overlays, before examining specific real-time KPI information.

Marine content and connectors

Unique to Marine with graphics, layouts, and connectors specific to ship operations. Customize the application with your company branding and system attributes to accommodate different operations environments and business goals.

Templated design

AVEVA's software technology is focused on templated design techniques to improve the development experience. This reduces overall engineering effort and drives best-in-class total cost of ownership.

Incorporate digital ship systems

Benefit from centralized visibility by extending data gathering to connected workers, vessel performance, and end-to-end maintenance requirements to reduce the overall costs of operations through workforce efficiency and greater visibility to key KPIs and operational conditions.

Minimize risk to people, assets, and operations

Improve decision-making by increasing situational awareness of asset operating conditions to move from reactive crisis mitigation to proactive risk management across departmental operations. Supplement operator knowledge to extend the useful life of ship assets, ensure the safety of workers, and improve operational efficiency.

Single version of the truth for business agility

By empowering workers with actionable information through context-based integrated data visualization and analysis, AVEVA's Unified Operations Center for Marine maximizes the use of all available data in making informed decisions to improve ship operations in real-time.
