

AVEVA Launches Competition for Chemical Engineering Students

Supporting the next generation of talent in a new era of digital transformation

Cambridge, 11 December 2018 – AVEVA, a global leader in engineering and industrial software, is for the first time inviting senior year chemical engineering students in North America to enter a competition with industrial process simulation software at its center.

The competition will involve using SimCentral, AVEVA's industrial simulation platform, to solve a problem created by the company in collaboration with Dr. Richard Turton, renowned author and industry expert in the field of chemical process simulation. The competition will take place remotely and students do not need to be proficient in the software to enter – training will be provided.

The competition aims to introduce students to new skills and techniques in preparation for careers that increasingly rely on Industry 4.0 and the use of modern engineering process design, simulation and optimisation applications. Students are encouraged to be as innovative and creative as possible in their approach.

"By participating in this competition, students will be able to gain valuable experience that will stand them in good stead as they look to transition from academia to the workplace," said Amish Sabharwal, Vice President of Engineering at AVEVA. "The digital transformation of the chemical engineering industry is now underway and I look forward to seeing the work its future stars produce," he added.

Registration for the competition is now live, deadline 31 December 2018. Students can register via <https://sw.aveva.com/academic-program-competition>

The best two submissions, as judged by AVEVA and Dr. Turton, will receive cash prizes:

- First place: \$3,000
- Runner-up: \$1,500

The full details of the task will be circulated to entrants on 7 January 2019, with 15 March the deadline for submissions and the winners being announced on 30 April 2019.

AVEVA is unable to open this competition to students in Quebec.

About AVEVA

AVEVA is a global leader in engineering and industrial software, driving digital transformation across the entire asset and operational life cycle of capital-intensive industries. The company's engineering, planning and operations, asset performance, and monitoring and control solutions deliver proven results to over 16,000 customers across the globe. Its customers are supported by the largest industrial software ecosystem, including 4,200 partners and 5,700 certified developers. AVEVA is headquartered in Cambridge, UK, with over 4,400 employees at 80 locations in over 40 countries.
