

Learning, Training & One Point Lesson

Nearly everyone recognizes the value and benefits of effective manufacturing training. Developing your employees' skills leads to improved performance and productivity as well as reduced downtime.

Our process includes understanding the student's aptitude and abilities before training is developed. From this people assessment, training is developed that achieves the results intended.

Once resources are trained, a significant hurdle is achieved and a focus on outcomes vs. excuses can be explored.

Courses are typically focused on solving one key technical or operational problem such as:

- How do I know if the problem is the control system code or is a physical issue?
- How do I develop a new report from Historian?
