

ONESHEET

AVEVA™ Reports for Operations – 2023 R2 what's new

Leading the way in industrial reporting technology

AVEVA Reports for Operations is a production, performance, and compliance reporting solution applicable to all industries. The solution's easy-to-use, configuration-based approach means you don't need SQL or programming expertise to design attractive, useful reports for plants or processes. Instead, users configure reports through a simple drag-and-drop method.

By removing the need for technical resources, you can generate more reports in less time and strengthen internal communication and collaboration.

AVEVA

AVEVA Reports for Operations: What's new in the 2023 R2 release?

Improvements to AVEVA Reports in this new release finalize the complete integration support for AVEVA™ PI System™ as well as support for the industry standard ISA S88 for batch processing control. With this support, you'll be able to draw on a greater range of data and data sources for your reports and dashboards.

New driver: PI Event Frames

This rounds out the full support of AVEVA PI System data connectors, adding to the extensive list including:

- Asset framework (SDK v2018 SP3)
- Asset framework historical values
- Asset framework real-time values
- "Classic" historical values
- Web API historical values

Batch management support of nested batches (ISA S88 compliant)

With this new support, you can configure and report on multiple levels of nested batches.

Driver type: Batch

Collect batch-specific data with this batch driver type that you can connect to data sources.
