

Climate action at AVEVA

AVEVA is working toward a future that keeps global warming below 1.5°C

Our Environmental, Social and Governance approach

Our ESG vision and supporting framework sets the direction we take to drive sustainability throughout our own operations, our culture and through the software we develop.

We are committed to reducing our impact on the planet. We aspire to lead by example on how we measure, mitigate and report on our Greenhouse Gas (GHG) emissions and to working across our entire value chain to accelerate the transition to net zero global economy.

Climate action goals

- 2030:**
 90% absolute reduction in GHG emissions across AVEVA's operations (scope 1 & 2)
 50% absolute reduction across our value chain emissions (scope 3)
 100% annual sourcing of renewable electricity

- 2050:**
 Maintain at least 90% absolute reduction in GHG emissions across AVEVA's operations (scope 1 & 2) and achieve a 90% absolute reduction across our value chain emissions (scope 3)

All goals set against and 2020 baseline

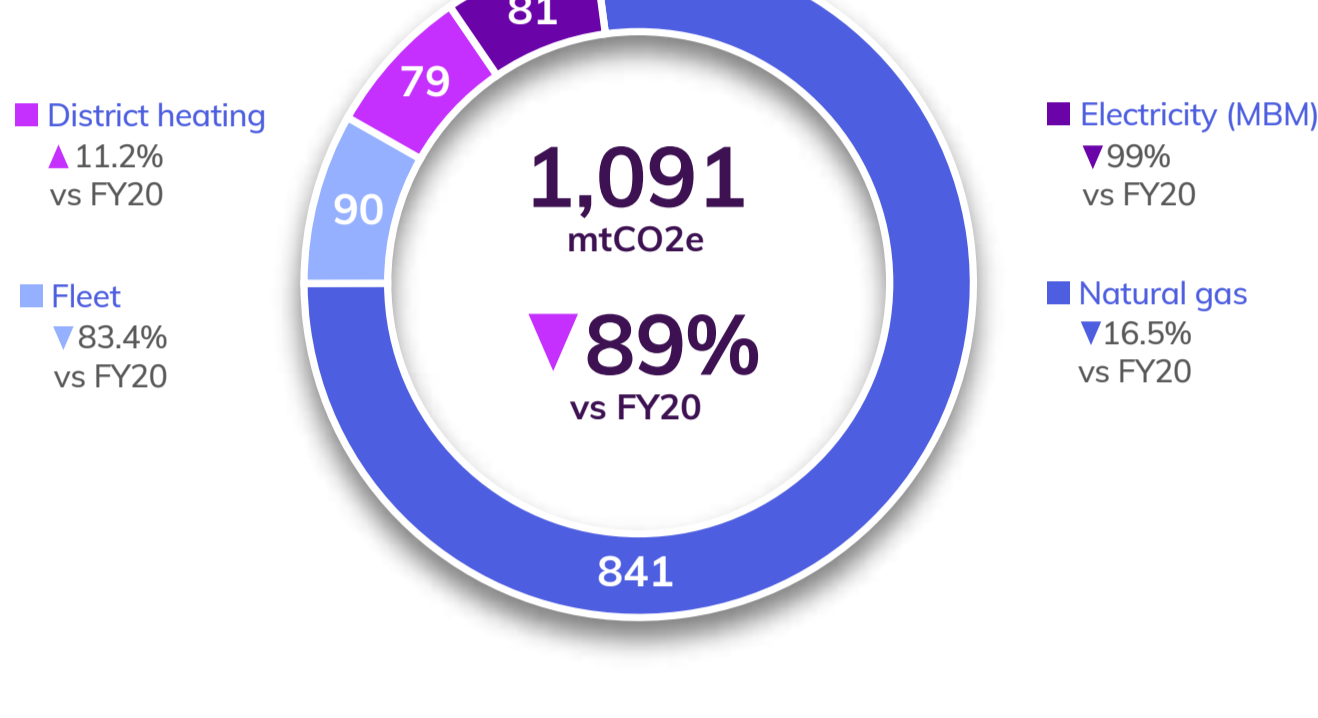

Our carbon emissions across our value chain

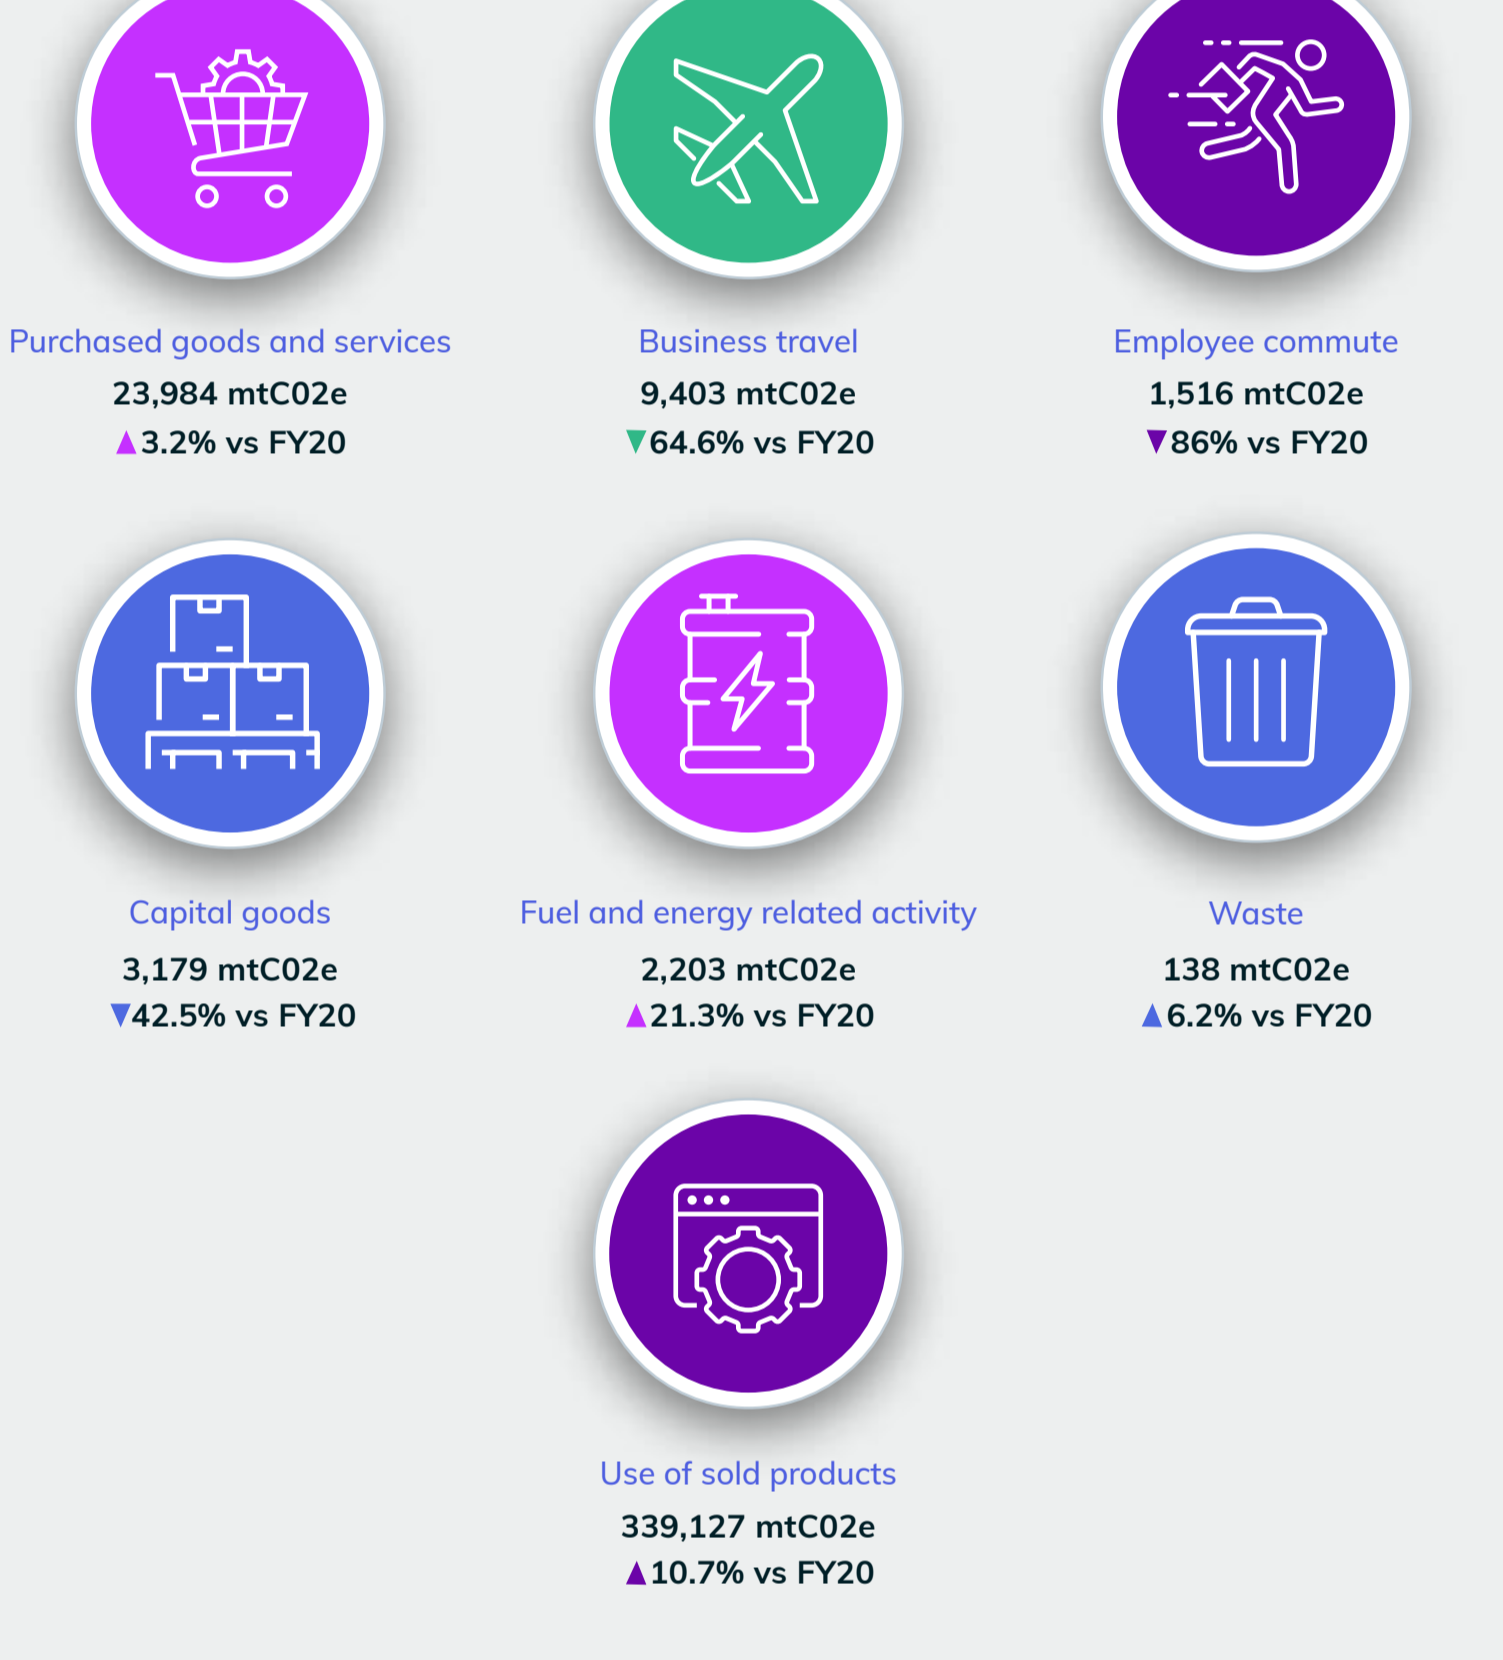

A deep dive into our data

FY22 Total scope 1 & 2 operational footprint

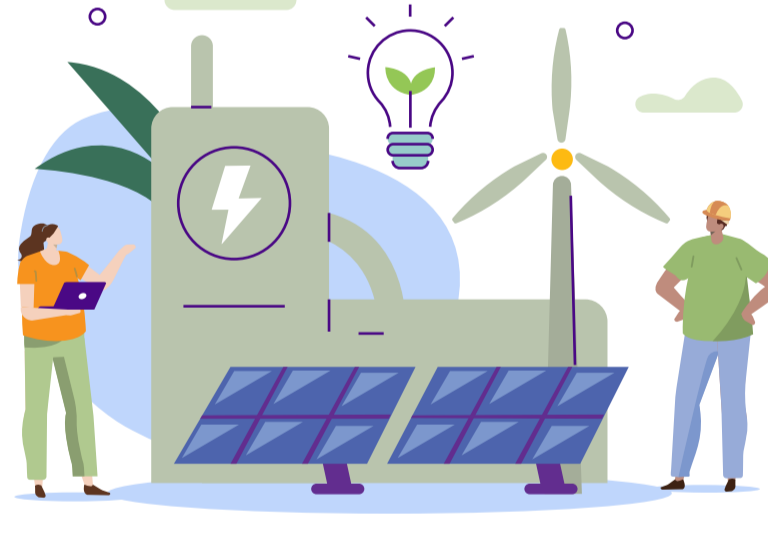

FY22 Scope 3 Value Chain Footprint 379,550 mtCO2e (▲ 1.3% vs FY20)

Our road to net zero

2020–2022: First milestones

- Set near and long-term emissions reduction targets validated by SBTi
- Joined CEBA and increased annual sourcing of renewable electricity for global facilities to 100%
- Launched engagement with top suppliers through the CDP supply chain platform
- Fully aligned with TCFD recommendations
- Joined Green Software Foundation to contribute to an industry-wide reduction in carbon emissions

2023–2025: Accelerating mitigation actions

- Conduct on-site abatement studies at top global facilities by energy consumption and develop follow-up plans
- Update travel policies and platform as part of advancing more sustainable travel choices
- Continue engaging with suppliers, including data center providers, and deploy updated policies and processes
- Increase the number of cloud offerings and deploy green product design principles
- Pursue 100% electrification of our company car fleet

2026–2030: Scaling up to hit emissions reduction targets

- Evolve renewable energy procurement strategy to reflect current opportunities incl. potential PPAs
- Develop and deploy offset strategy based on certified carbon removal projects
- Continue to educate employees on sustainable commuting, travel and work-from-home options
- Expand engagement with customers on further emissions reduction opportunities associated with Use of Sold Products
- Continue collaboration to advance the next generation of sustainable aviation fuels through the First Movers Coalition

2030–2050: Reaching our long-term net-zero ambition

Delivering efficient, sustainable solutions will be our utmost priority. Not only will we actively work towards cloud migration to enable low carbon transitions for our customers, but we will also prioritize decarbonization across our value chain.
