

# TEQNOVATION REMOTE DESKTOP PLUGIN

TeQRDP (TeQnovation Remote Desktop Plugin) is one of many useful plugins TeQnovation developed to improve usability or design of the AVEVA System Platform. It is An AVEVA Client Control object for System Platform to implement a direct connection via your AVEVA SCADA system(based on the System Platform) to your remote desktops without a need to fill a login and password after configuration. Thus, the SCADA is fully capable of accessing the remote desktops through its own framework without the need of accessing the Windows system.

*This is an essential advantage because it enables the operator to use the system as before with a single sign-on policy being maintained. He doesn't need to log-in each time before being able to acknowledge an alarm or change a setpoint in a remote system, which would not be acceptable to the operators and will slow down operator actions.*

## Features

- Enables AVEVA InTouch Runtime to have Remote Desktop access using System Platform.
- Single Sign-On( SSO)
- Compatible with latest AVEVA System.

## Types of Licensing Available

- Single Licensing
- Volume Licensing
- Free 90-day Trial Period

## Minimum Requirement

- Microsoft .NET Framework 3.5

TeQRDP has been tested on the followings :

- Application Server 2014 R2 SP1 4.1
- Application Server 2017 Update 3 SP1 17.3.100

## Operating Systems

- Windows Server 2012 R2

## Remote Desktop Client

- Windows 10 Professional
- Windows 7 Service Pack 2
- Windows Server 2012
