

SECURITY BULLETIN AVEVA-2025-006

Title

AVEVA Edge (formerly InduSoft Web Studio): Use of Risky Hashing Algorithms

Rating

High

Published By

AVEVA Product Security Response Center

Overview

AVEVA Group Limited on behalf of itself and its subsidiaries ("AVEVA") is releasing a security update to address vulnerabilities impacting:

- AVEVA Edge (formerly InduSoft Web Studio) 2023 R2 and all prior versions.

Vulnerability Technical Details

1. Passwords hashed with MD5

The vulnerability, if exploited, could allow a miscreant with read access to Edge Project files or Edge Offline Cache files to reverse engineer Edge users' app-native or Active Directory passwords through computational brute-forcing of weak hashes.

CWE-327: Use of a Broken or Risky Cryptographic Algorithm

CVSSv4.0: **8.3 High** | **AV:L/AC:L/AT:N/PR:L/UI:N/VC:H/VI:N/VA:N/SC:H/SI:H/SA:N**

CVSSv3.1: **8.4 High** | **AV:L/AC:L/PR:L/UI:N/S:C/C:H/I:H/A:N**

CVE-2025-9317

Recommendations

AVEVA recommends that organizations evaluate the impact of these vulnerabilities based on their operational environment, architecture, and product implementation. Customers using affected product versions and affected AVEVA Edge project files should take the following actions to mitigate the risk of exploit:

- Apply AVEVA Edge 2023 R2 P01 Security Update and migrate old project files.
- For projects that cannot be migrated (e.g. backups or transient copies), evaluate the risk of potential password leakage from these files and implement stricter read access controls to protect these unsafe files.
- Require AVEVA Edge users to change their passwords.

Important: Edge project migration from older versions to 2023 R2 P01 is one-way due to the change in password hashing algorithms.

Security Update Downloads

AVEVA Edge

- AVEVA Edge 2023 R2 P01 and higher addresses this vulnerability.

Defensive Measures and General Considerations

The following general defensive measures are recommended:

- Access Control Lists should be applied to all folders where users will save and load project files.
- Maintain a trusted chain-of-custody on project files during creation, modification, distribution, backups, and use.
- Apply data-protection at the project level with a strong master password. For configuration step-by-step refer to AVEVA Edge “Technical Reference Manual” > Project Overview > Configuring Additional Project Settings > Options Tab > Data Protection.
- If passwords are being used as function parameters inside project documents (such as scripts or worksheets), it is recommended to remove those passwords and use project tags instead. For more information on tags refer to AVEVA Edge “Technical Reference Manual” > Tags and the Tag Database > About Tags and the Project Database.

Acknowledgements

AVEVA would like to thank:

- **João Varelas** for the discovery, coordinated disclosure of this vulnerability with AVEVA, and testing the fix in AVEVA’s Security Update.
- **CISA** for coordination of advisories and generation of CVEs

Support

For information on how to reach AVEVA support for your product, please refer to this link: [AVEVA Customer Support](#).

If you discover errors or omissions in this Security Notification, please report the finding to Support.

U.S. Department of Commerce Industrial Control Systems Security Guide

For general information regarding how to secure Industrial Control Systems please reference the NIST Guide to Operational Technology (OT) Security, [NIST SP800-82r3](#).

NVD Common Vulnerability Scoring System (CVSS v4.0)

The U.S. Department of Homeland Security has adopted the Common Vulnerability Scoring System (CVSS v4.0) that provides an open framework for communicating the characteristics and impacts of IT vulnerabilities. CVSS v4.0 produces a numerical score as well as a textual representation of that score reflecting the severity of a vulnerability. Scores range from 0.0 (no impact) to a maximum of 10.0 (critical impact with minimal effort to exploit). For additional information please refer to the [CVSS v4.0 specifications](#).

Coordination with Authorities

Organizations observing suspected malicious activity should follow established internal procedures and report findings to applicable authorities for tracking and correlation against other incidents.
