AVEVA Security Bulletin LFSEC00000135

Title
Wonderware System Platform Vulnerability – Potential for Unauthorized Access to Credentials

Rating
High

Published By
AVEVA Software Security Response Center

Overview
AVEVA Software, LLC. (“AVEVA”) has released a new version of System Platform which includes a security update to address vulnerabilities in Wonderware System Platform 2017 Update 2 and all prior versions.

These vulnerabilities could allow unauthorized access to the credentials for the ArchestrA Network User Account.

AVEVA recommends that organizations evaluate the impact of these vulnerabilities based on their operational environment, architecture, and product implementation.

Recommendations
Customers using Wonderware System Platform 2017 Update 2 and all prior versions are affected and should upgrade to System Platform 2017 Update 3 as soon as possible.

For information regarding how to secure Industrial Control Systems please reference NIST SP800-82r2.

Vulnerability Details
System Platform utilizes an ArchestrA Network User Account for authentication of system processes and inter-node communications. An unauthorized user could make use of an API to obtain the credentials for this account.

Security Update
The following Security Updates address the vulnerabilities outlined in this Security Bulletin: System Platform 2017 Update 3.

Affected Products, Components, and Corrective Security Update

The following table identifies the currently supported products affected. Software updates can be downloaded from the Global Customer Support “Software Download” area or from the links below:

Vulnerability Characterization and CVSSv3 Rating

[CWE-522]: Insufficiently Protected Credentials, [CWE-250]: Execution with Unnecessary Privileges, [CWE-862]: Missing Authorization

- Wonderware System Platform 2017 Update 2 and all prior versions:

Acknowledgements

AVEVA would like to thank:
- [Vladimir Dashchennko from Kaspersky Lab](#) for the discovery and responsible disclosure of this vulnerability
- [ICS-Cert](#) for coordination of advisories
Support

Cyber Security Standards and Best Practices

For information regarding how to secure Industrial Control Systems please reference NIST SP800-82r2.

NVD Common Vulnerability Scoring System (CVSS v3)

The U.S. Department of Homeland Security has adopted the common Vulnerability Scoring System (CVSS v3) that provides an open framework for communicating the characteristics and impacts of IT vulnerabilities. CVSS v3 produces a numerical score as well as a textual representation of that score reflecting the severity of a vulnerability. Scores range from 0.0 (no impact) to a maximum of 10.0 (critical impact with minimal effort to exploit). For additional information please refer to the CVSSv3 specifications.
