

ONESHEET

AVEVA™ Historian – 2023 R2 what's new

Capture and store high-fidelity industrial data. AVEVA Historian is a process database integrated with operations control that gives you access to your process, alarm, and event history data.

It combines advanced data storage and compression techniques with an industry-standard query interface. Its high-performance simplicity keeps your teams fully aware of operational performance so they can troubleshoot more quickly and make informed decisions.

What's new

- AVEVA Historian 2023 R2
 - AVEVA™ Historian Client 2023 R2

AVEVA

New in AVEVA Historian and AVEVA Historian Client 2023 R2

AVEVA™ Connect sign-on support

Common, simplified logins across OMI and Historian.
Centralized user authorization through AVEVA Connect.

Multi-lingual tags

Define descriptions and other meta-content in multiple languages. Show labels in the language users prefer.

Ad hoc expressions in trend

Create more meaningful trend charts with calculated pens.

Expanded functions

New functions added to ad hoc expressions make results simpler and more valuable.

Alarm grid filter/sort

Browser-based alarm history supports more filtering and sorting options.

Web-Excel integration

Easily transition from web charts to detailed analysis in Excel.

A new look for web

Updated web interface is more powerful and easier to use.

Export/import web content

Include saved charts in CSV configuration for import/export.

HTTPS-based communications

Internal AVEVA Historian network communication is more secure and easily integrates with HTTP proxies.

Live data via iData

View the latest historical values as the “live” values on OMI displays.
