

Invensys Operations Management Security Alert

Title

Wonderware InBatch and Foxboro I/A Series Batch Server lm_tcp buffer overflow (LFSEC00000051)

Rating

Medium

Published By

Invensys Operations Management Security Response Center

Overview

A vulnerability has been discovered in InBatch Server and I/A Batch Server in all supported versions of Wonderware InBatch and Foxboro I/A Series Batch. This vulnerability, if exploited, could allow Denial of Service (DoS), the consequence of which is a crash of the InBatch Server. The rating is medium and would require a malicious application that has access to port 9001 on the batch server and understands the protocol used on that port to send a partially valid message that overflows an internal buffer.

This security bulletin announces that software updates are available to customers running Wonderware InBatch and I/A Series Batch on all supported versions. Please refer to the **Affected Products and Components** section for the location of the Security Updates. You can also contact [Invensys Customer First Support](#) for more information.

Recommendations

Customers using versions of Wonderware InBatch 8.1 SP1, Wonderware 9.0 Sp1 and I/A Series Batch 8.1 SP1 SHOULD apply the security update to all nodes where the InBatch Server component is installed. It is required to perform an Exit-and-Shutdown from the InBatch Environment Display. During the install of the security update, operator and configuration clients of the InBatch system are not operational.

For customers not applying the Security Updates it is highly recommended that their Batch Server is on a secured network inaccessible from the Internet. As an immediate security measure it is advised to configure the network firewall to protect port 9001.

For information regarding how to secure Industrial Control Systems operating in a Microsoft Windows environment, please reference the [Invensys Securing Industrial Control Systems Guide](#)

NVD Common Vulnerability Scoring System

The U.S. Department of Homeland Security has adopted the common Vulnerability Scoring System (CVSS) that provides an open framework for communicating the characteristics and impacts of IT vulnerabilities. The system is comprised of components: impact, exploitability and complexity as well as added determinants such as authentication and impact type. In summary, the components such as impact are given an individual score between 0.0 and 10.0. The average of all components is the overall score where the maximum is 10.0. Details about this scoring system can be found here:

<http://nvd.nist.gov/cvss.cfm>

Our assessment of the vulnerability using the CVSS Version 2.0 calculator rates an Overall CVSS Score of 4.8. To review the assessment, use this link

[http://nvd.nist.gov/cvss.cfm?version=2&vector=\(AV:AN/AC:L/Au:N/C:N/I:N/A:C/E:P/RL:OF/RC:C\)](http://nvd.nist.gov/cvss.cfm?version=2&vector=(AV:AN/AC:L/Au:N/C:N/I:N/A:C/E:P/RL:OF/RC:C))

Customers have the option in the Environmental Score Metrics section of the calculator to further refine the assessment based on the organizational environment of the installed product. Adding the Environmental Score Metrics will assist the customer in determining the operational consequences of this vulnerability on their installation.¹

Affected Products and Components²

The following table identifies the currently supported products affected³.

Product and Component	Supported Operating System	Security Impact	Severity Rating	Software Update Download
Wonderware InBatch 8.1 – InBatch Server (all versions)	Windows XP Professional Windows 2000 Server Windows Server 2003	Denial of Service	Medium	https://wdn.wonderware.com/sites/WDN/Pages/Downloads/Software.aspx
Wonderware InBatch 9.0 – InBatch Server (all versions)	Windows XP Professional Windows Server 2003 Windows Server 2008	Denial of Service	Medium	https://wdn.wonderware.com/sites/WDN/Pages/Downloads/Software.aspx
I/A Series Batch 8.1 – I/A Series Batch Server (all versions)	Windows 2003 Server R2 SP2 or Windows XP Professional SP2	Denial of Service	Medium	https://wdn.wonderware.com/sites/WDN/Pages/Downloads/Software.aspx

³ Customers running earlier versions may contact their support provider for guidance.

Background

Wonderware InBatch and I/A Series Batch provide flexible batch management capabilities. The InBatch server component manages the execution of batches and related recipes in a structured way in coordination with controllers and User Interface.

The InBatch server component is typically installed on a dedicated server with no access from the internet or corporate network.

³ Customers running earlier versions may contact their support provider for guidance.

Vulnerability Characterization

The InBatch Server component contains a vulnerability that may allow Denial of Service in an unsecure deployment⁴. The vulnerability would require a malicious application that has access to port 9001 on the batch server and understands the protocol used on that port to send a partially valid message that overflows an internal buffer.

Any machine where the InBatch Server or I/A Series Batch server is installed is affected. No other components of Wonderware InBatch and I/A Series Batch are affected. Further mitigation beyond that identified in this Alert will be made available to customers running Wonderware InBatch and I/A Series Batch.

Update Information

Install the Security Update using instructions provided in the ReadMe for the product and component being installed. Before installing the security update, perform an Exit-and-Shutdown from the InBatch Environment Display. Be aware that operator and configuration clients of the InBatch system are not operational during this install.

Other Information

Acknowledgments

Invensys thanks Secunia (www.secunia.com), US-CERT, and ICS-CERT for their collaboration with us on this vulnerability.

Support

For information on how to reach Invensys Operations Management support for your product, refer to this link: [Invensys Customer First Support](#). If you discover errors or omissions in this bulletin, please report the finding to support.
